# SERVICE MANUAL

CHASSIS : LD33B

MODEL : 47LA64\*\* 47LA64\*\*-Z\*

## CAUTION

BEFORE SERVICING THE CHASSIS,  
READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

# SAFETY PRECAUTIONS

## IMPORTANT SAFETY NOTICE

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\triangle$  in the Schematic Diagram and Exploded View.

It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent Shock, Fire, or other Hazards.

Do not modify the original design without permission of manufacturer.

### General Guidance

An **isolation Transformer should always be used** during the servicing of a receiver whose chassis is not isolated from the AC power line. Use a transformer of adequate power rating as this protects the technician from accidents resulting in personal injury from electrical shocks.

It will also protect the receiver and its components from being damaged by accidental shorts of the circuitry that may be inadvertently introduced during the service operation.

If any fuse (or Fusible Resistor) in this TV receiver is blown, replace it with the specified.

When replacing a high wattage resistor (Oxide Metal Film Resistor, over 1 W), keep the resistor 10 mm away from PCB.

Keep wires away from high voltage or high temperature parts.

### Before returning the receiver to the customer,

always perform an **AC leakage current check** on the exposed metallic parts of the cabinet, such as antennas, terminals, etc., to be sure the set is safe to operate without damage of electrical shock.

### Leakage Current Cold Check(Antenna Cold Check)

With the instrument AC plug removed from AC source, connect an electrical jumper across the two AC plug prongs. Place the AC switch in the on position, connect one lead of ohm-meter to the AC plug prongs tied together and touch other ohm-meter lead in turn to each exposed metallic parts such as antenna terminals, phone jacks, etc.

If the exposed metallic part has a return path to the chassis, the measured resistance should be between 1 M $\Omega$  and 5.2 M $\Omega$ .

When the exposed metal has no return path to the chassis the reading must be infinite.

An other abnormality exists that must be corrected before the receiver is returned to the customer.

### Leakage Current Hot Check (See below Figure)

Plug the AC cord directly into the AC outlet.

### Do not use a line Isolation Transformer during this check.

Connect 1.5 K / 10 watt resistor in parallel with a 0.15  $\mu$ F capacitor between a known good earth ground (Water Pipe, Conduit, etc.) and the exposed metallic parts.

Measure the AC voltage across the resistor using AC voltmeter with 1000 ohms/volt or more sensitivity.

Reverse plug the AC cord into the AC outlet and repeat AC voltage measurements for each exposed metallic part. Any voltage measured must not exceed 0.75 volt RMS which corresponds to 0.5 mA.

In case any measurement is out of the limits specified, there is possibility of shock hazard and the set must be checked and repaired before it is returned to the customer.

### Leakage Current Hot Check circuit

When 25A is impressed between Earth and 2nd Ground for 1 second, Resistance must be less than 0.1  $\Omega$

\*Base on Adjustment standard

# SERVICING PRECAUTIONS

**CAUTION:** Before servicing receivers covered by this service manual and its supplements and addenda, read and follow the **SAFETY PRECAUTIONS** on page 3 of this publication.

**NOTE:** If unforeseen circumstances create conflict between the following servicing precautions and any of the safety precautions on page 3 of this publication, always follow the safety precautions. Remember: Safety First.

## General Servicing Precautions

1. Always unplug the receiver AC power cord from the AC power source before;

- Removing or reinstalling any component, circuit board module or any other receiver assembly.
- Disconnecting or reconnecting any receiver electrical plug or other electrical connection.
- Connecting a test substitute in parallel with an electrolytic capacitor in the receiver.

**CAUTION:** A wrong part substitution or incorrect polarity installation of electrolytic capacitors may result in an explosion hazard.

- Test high voltage only by measuring it with an appropriate high voltage meter or other voltage measuring device (DVM, FETVOM, etc) equipped with a suitable high voltage probe. Do not test high voltage by "drawing an arc".
- Do not spray chemicals on or near this receiver or any of its assemblies.
- Unless specified otherwise in this service manual, clean electrical contacts only by applying the following mixture to the contacts with a pipe cleaner, cotton-tipped stick or comparable non-abrasive applicator; 10 % (by volume) Acetone and 90 % (by volume) isopropyl alcohol (90 % - 99 % strength)
- CAUTION:** This is a flammable mixture. Unless specified otherwise in this service manual, lubrication of contacts is not required.
- Do not defeat any plug/socket B+ voltage interlocks with which receivers covered by this service manual might be equipped.
- Do not apply AC power to this instrument and/or any of its electrical assemblies unless all solid-state device heat sinks are correctly installed.
- Always connect the test receiver ground lead to the receiver chassis ground before connecting the test receiver positive lead. Always remove the test receiver ground lead last.
- Use with this receiver only the test fixtures specified in this service manual.

**CAUTION:** Do not connect the test fixture ground strap to any heat sink in this receiver.

## Electrostatically Sensitive (ES) Devices

Some semiconductor (solid-state) devices can be damaged easily by static electricity. Such components commonly are called Electrostatically Sensitive (ES) Devices. Examples of typical ES devices are integrated circuits and some field-effect transistors and semiconductor "chip" components. The following techniques should be used to help reduce the incidence of component damage caused by static by static electricity.

- Immediately before handling any semiconductor component or semiconductor-equipped assembly, drain off any electrostatic charge on your body by touching a known earth ground. Alternatively, obtain and wear a commercially available discharging wrist strap device, which should be removed to prevent potential shock reasons prior to applying power to the unit under test.

- After removing an electrical assembly equipped with ES devices, place the assembly on a conductive surface such as aluminum foil, to prevent electrostatic charge buildup or exposure of the assembly.
  - Use only a grounded-tip soldering iron to solder or unsolder ES devices.
  - Use only an anti-static type solder removal device. Some solder removal devices not classified as "anti-static" can generate electrical charges sufficient to damage ES devices.
  - Do not use freon-propelled chemicals. These can generate electrical charges sufficient to damage ES devices.
  - Do not remove a replacement ES device from its protective package until immediately before you are ready to install it. (Most replacement ES devices are packaged with leads electrically shorted together by conductive foam, aluminum foil or comparable conductive material).
  - Immediately before removing the protective material from the leads of a replacement ES device, touch the protective material to the chassis or circuit assembly into which the device will be installed.
- CAUTION:** Be sure no power is applied to the chassis or circuit, and observe all other safety precautions.
- Minimize bodily motions when handling unpackaged replacement ES devices. (Otherwise harmless motion such as the brushing together of your clothes fabric or the lifting of your foot from a carpeted floor can generate static electricity sufficient to damage an ES device.)

## General Soldering Guidelines

- Use a grounded-tip, low-wattage soldering iron and appropriate tip size and shape that will maintain tip temperature within the range of 500 °F to 600 °F.
- Use an appropriate gauge of RMA resin-core solder composed of 60 parts tin/40 parts lead.
- Keep the soldering iron tip clean and well tinned.
- Thoroughly clean the surfaces to be soldered. Use a mall wire-bristle (0.5 inch, or 1.25 cm) brush with a metal handle. Do not use freon-propelled spray-on cleaners.
- Use the following unsoldering technique
  - Allow the soldering iron tip to reach normal temperature. (500 °F to 600 °F)
  - Heat the component lead until the solder melts.
  - Quickly draw the melted solder with an anti-static, suction-type solder removal device or with solder braid.**CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
- Use the following soldering technique.
  - Allow the soldering iron tip to reach a normal temperature (500 °F to 600 °F)
  - First, hold the soldering iron tip and solder the strand against the component lead until the solder melts.
  - Quickly move the soldering iron tip to the junction of the component lead and the printed circuit foil, and hold it there only until the solder flows onto and around both the component lead and the foil.**CAUTION:** Work quickly to avoid overheating the circuit board printed foil.
- Closely inspect the solder area and remove any excess or splashed solder with a small wire-bristle brush.

### IC Remove/Replacement

Some chassis circuit boards have slotted holes (oblong) through which the IC leads are inserted and then bent flat against the circuit foil. When holes are the slotted type, the following technique should be used to remove and replace the IC. When working with boards using the familiar round hole, use the standard technique as outlined in paragraphs 5 and 6 above.

#### Removal

1. Desolder and straighten each IC lead in one operation by gently prying up on the lead with the soldering iron tip as the solder melts.
2. Draw away the melted solder with an anti-static suction-type solder removal device (or with solder braid) before removing the IC.

#### Replacement

1. Carefully insert the replacement IC in the circuit board.
2. Carefully bend each IC lead against the circuit foil pad and solder it.
3. Clean the soldered areas with a small wire-bristle brush. (It is not necessary to reapply acrylic coating to the areas).

### "Small-Signal" Discrete Transistor

#### Removal/Replacement

1. Remove the defective transistor by clipping its leads as close as possible to the component body.
2. Bend into a "U" shape the end of each of three leads remaining on the circuit board.
3. Bend into a "U" shape the replacement transistor leads.
4. Connect the replacement transistor leads to the corresponding leads extending from the circuit board and crimp the "U" with long nose pliers to insure metal to metal contact then solder each connection.

### Power Output, Transistor Device

#### Removal/Replacement

1. Heat and remove all solder from around the transistor leads.
2. Remove the heat sink mounting screw (if so equipped).
3. Carefully remove the transistor from the heat sink of the circuit board.
4. Insert new transistor in the circuit board.
5. Solder each transistor lead, and clip off excess lead.
6. Replace heat sink.

### Diode Removal/Replacement

1. Remove defective diode by clipping its leads as close as possible to diode body.
2. Bend the two remaining leads perpendicular y to the circuit board.
3. Observing diode polarity, wrap each lead of the new diode around the corresponding lead on the circuit board.
4. Securely crimp each connection and solder it.
5. Inspect (on the circuit board copper side) the solder joints of the two "original" leads. If they are not shiny, reheat them and if necessary, apply additional solder.

### Fuse and Conventional Resistor

#### Removal/Replacement

1. Clip each fuse or resistor lead at top of the circuit board hollow stake.
2. Securely crimp the leads of replacement component around notch at stake top.

3. Solder the connections.

**CAUTION:** Maintain original spacing between the replaced component and adjacent components and the circuit board to prevent excessive component temperatures.

### Circuit Board Foil Repair

Excessive heat applied to the copper foil of any printed circuit board will weaken the adhesive that bonds the foil to the circuit board causing the foil to separate from or "lift-off" the board. The following guidelines and procedures should be followed whenever this condition is encountered.

#### At IC Connections

To repair a defective copper pattern at IC connections use the following procedure to install a jumper wire on the copper pattern side of the circuit board. (Use this technique only on IC connections).

1. Carefully remove the damaged copper pattern with a sharp knife. (Remove only as much copper as absolutely necessary).
2. Carefully scratch away the solder resist and acrylic coating (if used) from the end of the remaining copper pattern.
3. Bend a small "U" in one end of a small gauge jumper wire and carefully crimp it around the IC pin. Solder the IC connection.
4. Route the jumper wire along the path of the out-away copper pattern and let it overlap the previously scraped end of the good copper pattern. Solder the overlapped area and clip off any excess jumper wire.

#### At Other Connections

Use the following technique to repair the defective copper pattern at connections other than IC Pins. This technique involves the installation of a jumper wire on the component side of the circuit board.

1. Remove the defective copper pattern with a sharp knife. Remove at least 1/4 inch of copper, to ensure that a hazardous condition will not exist if the jumper wire opens.
2. Trace along the copper pattern from both sides of the pattern break and locate the nearest component that is directly connected to the affected copper pattern.
3. Connect insulated 20-gauge jumper wire from the lead of the nearest component on one side of the pattern break to the lead of the nearest component on the other side. Carefully crimp and solder the connections.

**CAUTION:** Be sure the insulated jumper wire is dressed so the it does not touch components or sharp edges.

# SPECIFICATION

NOTE : Specifications and others are subject to change without notice for improvement.

## 1. Application range

This specification is applied to the LED TV used LD33B chassis.

## 2. Requirement for Test

Each part is tested as below without special appointment.

- 1) Temperature: 25 °C ± 5 °C(77 °F ± 9 °F), CST: 40 °C ± 5 °C
- 2) Relative Humidity: 65 % ± 10 %
- 3) Power Voltage
  - : Standard input voltage (AC 100-240 V~, 50/60 Hz)
  - \* Standard Voltage of each products is marked by models.
- 4) Specification and performance of each parts are followed each drawing and specification by part number in accordance with BOM.
- 5) The receiver must be operated for about 20 minutes prior to the adjustment.

## 3. Test method

- 1) Performance: LGE TV test method followed
- 2) Demanded other specification
  - Safety : CE, IEC specification
  - EMC : CE, IEC

## 4. Model General Specification

## 7.2. HDMI Input(1.3)

No.	Resolution	H-freq(kHz)	V-freq.(kHz)	Pixel clock(MHz)	Proposed	3D input proposed mode
1	1280*720	45.00	60.00	74.25	HDTV 720P	2D to 3D, Side by Side(half), Top & Bottom, Single Frame Sequential
2	1280*720	37.500	50	74.25	HDTV 720P	
3	1920*1080	33.75	60.00	74.25	HDTV 1080I	2D to 3D, Side by Side(half), Top & Bottom
4	1920*1080	28.125	50.00	74.25	HDTV 1080I	
5	1920*1080	27.00	24.00	74.25	HDTV 1080P	2D to 3D, Side by Side(Half), Top & Bottom, Checker Board
6	1920*1080	28.12	25	74.25	HDTV 1080P	
7	1920*1080	33.75	30.00	74.25	HDTV 1080P	
8	1920*1080	67.50	60.00	148.5	HDTV 1080P	2D to 3D, Side by Side(half), Top & Bottom, Checkerboard, Single Frame Sequential, Row Interleaving, Column Interleaving
9	1920*1080	56.25	50	148.5	HDTV 1080P	

## 7.3. RF Input(3D supported mode manually)

No.	Resolution	Proposed	3D input proposed mode
1	HD	1080I 720P	2D to 3D Side by Side(Half) Top & Bottom
2	SD	576P 576I	2D to 3D

## 7.4. RF Input (3D supported mode automatically)

No.	Signal	3D input proposed mode
1	Frame Compatible	Side by Side(Half), Top & Bottom

## 7.5. USB Input (3D supported mode manually)

No.	Resolution	H-freq(kHz)	V-freq.(Hz)	Pixel clock(MHz)	Proposed	3D input proposed mode
1	1920*1080	33.75	30	74.25	HDTV 1080P	2D to 3D, <b>Side by Side(Half)*</b> , <b>Top &amp; Bottom*</b> , <b>Checkerboard*</b> , Row Interleaving, Column Interleaving (Photo : side by Side(half), Top & Bottom)
	Others	-	-	-	640*350 720*400 640*480 800*600 1152*864 1280*1024	2D to 3D

(“\*” 3D supported mode manually & automatically)

## 7.6. HDMI-PC Input (3D supported mode manually)

No.	Resolution	H-freq(kHz)	V-freq.(Hz)	Pixel clock(MHz)	3D input proposed mode	Proposed
1	1024*768	48.36	60	65	2D to 3D, Side by Side(half) Top & Bottom	HDTV 768P
2	1360*768	47.71	60	85.5	2D to 3D, Side by Side(half) Top & Bottom	HDTV 768P
3	1920*1080	67.500	60	148.50	2D to 3D, Side by Side(half) Top & Bottom, Checker Board, Single Frame Sequential, Row Interleaving, Column Interleaving	HDTV 1080P
4	Others	-	-	-	2D to 3D	640*350 720*400 640*480 800*600 1152*864

## 7.7. DLNA Input (3D supported mode manually)

No.	Resolution	H-freq(kHz)	V-freq.(Hz)	Pixel clock(MHz)	Proposed	3D input proposed mode
1	1920*1080	33.75	30	74.25		2D to 3D, <b>Side by Side(Half)*, Top &amp; Bottom*, Checker Board*</b> , Row Interleaving, Column Interleaving(Photo : Side by Side(Half), Top&Bottom)

("\*\*") 3D supported mode manually & automatically

## 7.8. Component Input(3D) (3D supported mode manually)

No.	Resolution	H-freq(kHz)	V-freq.(Hz)	Pixel clock	Proposed	3D input proposed mode
1	1280*720	45.00	60.00	74.25	HDTV 720P	2D to 3D, Side by Side(Half), Top & Bottom
2	1280*720	37.500	50	74.25	HDTV 720P	
3	1920*1080	33.75	60.00	74.25	HDTV 1080I	
4	1920*1080	28.125	50.00	74.25	HDTV 1080I	
5	1920*1080	27.00	24.00	74.25	HDTV 1080P	
6	1920*1080	28.12	25	74.25	HDTV 1080P	
7	1920*1080	33.75	30.00	74.25	HDTV 1080P	
8	1920*1080	67.50	60.00	148.5	HDTV 1080P	
9	1920*1080	56.250	50	148.5	HDTV 1080P	

## 7.9. 3D Input mode

No.	Side by Side	Top & Bottom	Checker board	Single Frame Sequential	Frame Packing	2D to 3D
1						

# ADJUSTMENT INSTRUCTION

## 1. Application Range

This specification sheet is applied to all of the LED TV with LD33B chassis.

## 2. Designation

- (1) Because this is not a hot chassis, it is not necessary to use an isolation transformer. However, the use of isolation transformer will help protect test instrument.
- (2) Adjustment must be done in the correct order.
- (3) The adjustment must be performed in the circumstance of  $25^{\circ}\text{C} \pm 5^{\circ}\text{C}$  of temperature and  $65\% \pm 10\%$  of relative humidity if there is no specific designation.
- (4) The input voltage of the receiver must keep AC 100-240 V~, 50/60 Hz.
- (5) The receiver must be operated for about 5 minutes prior to the adjustment when module is in the circumstance of over 15.

In case of keeping module is in the circumstance of  $0^{\circ}\text{C}$ , it should be placed in the circumstance of above  $15^{\circ}\text{C}$  for 2 hours.

In case of keeping module is in the circumstance of below  $-20^{\circ}\text{C}$ , it should be placed in the circumstance of above  $15^{\circ}\text{C}$  for 3 hours.

### [Caution]

When still image is displayed for a period of 20 minutes or longer (Especially where W/B scale is strong. Digital pattern 13ch and/or Cross hatch pattern 09ch), there can some afterimage in the black level area.

## 3. Automatic Adjustment

### 3.1. MAC address D/L, CI+ key D/L, Widevine key D/L, ESN D/L, HDCP14/20 D/L

Connect: USB port

Communication Prot connection

- Com 1,2,3,4 and 115200(Baudrate)
- Mode check: Online Only
- Check the test process: DETECT -> MAC -> CI -> Widevine -> ESN -> HDCP14 -> HDCP20
- Play: Press Enter key
- Result: Ready, Test, OK or NG
- Printer Out (MAC Address Label)

## 3.2. LAN Inspection

### 3.2.1. Equipment & Condition

- Each other connection to LAN Port of IP Hub and Jig

### 3.2.2. LAN inspection solution

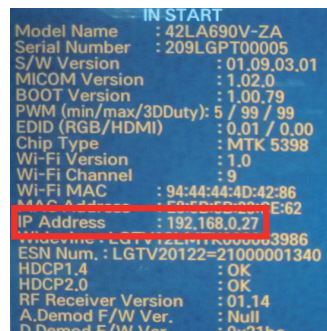

- LAN Port connection with PCB
- Setting automatic IP

- If you want manual connection, enter Network connection at MENU Mode of TV. Press Start connection key, then Network will be connected.

- Setting state confirmation
- If automatic setting is finished, you confirm IP and MAC Address at 'in start' menu mode.

### 3.2.3. WIDEVINE key Inspection

- Confirm key input data at the "IN START" MENU Mode.

```

IN START
Model Name      : 42LA690V-ZA
Serial Number   : 209LGPT00005
S/W Version    : 01.09.03.01
MICOM Version   : 1.02.0
BOOT Version   : 1.00.79
PWM (min/max/3DDuty): 5 / 99 / 99
EDID (RGB/HDMI) : 0.01 / 0.00
Chip Type      : MTK 5398
Wi-Fi Version   : 1.0
Wi-Fi Channel   : 9
Wi-Fi MAC      : 94:44:44:42:86
MAC Address    : E8:5B:5B:23:CE:62
Widevine       : LGTV12LMTK000063986
HDCP1.4        : OK
HDCP2.0        : OK
RF Receiver Version : 01.14
A.Demod F/W Ver. : Null
D.Demod F/W Ver. : 0x21bc
  
```

### 3.3. LAN PORT INSPECTION(PING TEST)

Connect SET → LAN port == PC → LAN Port

#### 3.3.1. Equipment setting

- (1) Play the LAN Port Test PROGRAM.
  - (2) Input IP set up for an inspection to Test Program.
- \*IP Number : 12.12.2.2

#### 3.3.2. LAN PORT inspection(PING TEST)

- (1) Play the LAN Port Test Program.
- (2) Connect each other LAN Port Jack.
- (3) Play Test (F9) button and confirm OK Message.
- (4) Remove LAN cable.

### 3.4. Model name & Serial number Download

#### 3.4.1. Model name & Serial number D/L

- Press "P-ONLY" key of service remote control.
- (Baud rate : 115200 bps)
- Connect RS-232C Signal to USB Cable to USB.
- Write Serial number by use USB port.
- Must check the serial number at Instart menu.

#### 3.4.2. Method & notice

- (1) Serial number D/L is using of scan equipment.
- (2) Setting of scan equipment operated by Manufacturing Technology Group.
- (3) Serial number D/L must be conformed when it is produced in production line, because serial number D/L is mandatory by D-book 4.0.

#### \* Manual Download (Model Name and Serial Number)

If the TV set is downloaded by OTA or service man, sometimes model name or serial number is initialized.(Not always)  
It is impossible to download by bar code scan, so It need Manual download.

- 1) Press the "Instart" key of Adjustment remote control.
- 2) Go to the menu "7.Model Number D/L" like below photo.
- 3) Input the Factory model name(ex 42LA690V-ZA) or Serial number like photo.

- 4) Check the model name Instart menu. → Factory name displayed. (ex 42LA690V-ZA)
- 5) Check the Diagnostics.(DTV country only) → Buyer model displayed. (ex 42LA690V-ZA)

### 3.5. CI+ Key checking method

- Check the Section 3.1

Check whether the key was downloaded or not at 'In Start' menu. (Refer to below).

=> Check the Download to CI+ Key value in LGset.

### 3.5.1. Check the method of CI+ Key value

- (1) Check the method on Instart menu
- (2) Check the method of RS232C Command
  - 1) Into the main ass'y mode(RS232: aa 00 00)

CMD 1	CMD 2	Data 0
A	A	0 0

- 2) Check the key download for transmitted command (RS232: ci 00 10)

CMD 1	CMD 2	Data 0
C	I	1 0

- 3) Result value
  - Normally status for download : OKx
  - Abnormally status for download : NGx

### 3.5.2. Check the method of CI+ key value(RS232)

- 1) Into the main ass'y mode(RS232: aa 00 00)

CMD 1	CMD 2	Data 0
A	A	0 0

- 2) Check the method of CI+ key by command (RS232: ci 00 20)

CMD 1	CMD 2	Data 0
C	I	2 0

- 3) Result value
  - i 01 OK 1d1852d21c1ed5dcx
  - CI+ Key Value

### 3.6. WIFI MAC ADDRESS CHECK

- (1) Using RS232 Command

	H-freq(kHz)	V-freq.(Hz)
Transmission	[A][I][Set ID][20][Cr]	[O][K][X] or [NG]

- (2) Check the menu on in-start

IN START	
Model Name	: GLOBAL-PLAT4

HDMI3	78 03 0C 00 30 00 80 1E 20 C0 0E 01 4F 3F FC 08 10 18 10 06 10 16 10 28 10

#### ⑦ Colorimetry Data Block(HDMI)

##### 1) The Model not supporting XvYcc

INPUT	MODEL NAME(HEX)
HDMI1	E3 05 00 00
HDMI2	E3 05 00 00
HDMI3	E3 05 00 00

#### 4.2.5. Adj. method

##### (1) Auto adj. method

- 1) Set TV in adj. mode using POWER ON key.
  - 2) Zero calibrate probe then place it on the center of the Display.
  - 3) Connect Cable.(RS-232C to USB)
  - 4) Select mode in adj. Program and begin adj.
  - 5) When adj. is complete (OK Sign), check adj. status pre mode. (Warm, Medium, Cool)
  - 6) Remove probe and RS-232C cable to complete adj.
- W/B Adj. must begin as start command "wb 00 00" , and finish as end command "wb 00 ff", and Adj. offset if need.

##### (2) Manual adjustment. method

- 1) Set TV in Adj. mode using POWER ON.
  - 2) Zero Calibrate the probe of Color Analyzer, then place it on the center of LCD module within 10 cm of the surface.
  - 3) Press ADJ key → EZ adjust using adj. R/C → 7. White-Balance then press the cursor to the right(key ►).  
(When right key(►) is pressed 204 Gray internal pattern will be displayed)
  - 4) One of R Gain / G Gain / B Gain should be fixed at 192, and the rest will be lowered to meet the desired value.
  - 5) Adjustment is performed in COOL, MEDIUM, WARM 3 modes of color temperature.
- If internal pattern is not available, use RF input. In EZ Adj. menu 7.White Balance, you can select one of 2 Test-pattern: ON, OFF. Default is inner(ON). By selecting OFF, you can adjust using RF signal in 204 Gray pattern.

##### ▪ Adjustment condition and cautionary items

- 1) Lighting condition in surrounding area  
Surrounding lighting should be lower 10 lux. Try to isolate adj. area into dark surrounding.
- 2) Probe location  
: Color Analyzer(CA-210) probe should be within 10 cm and perpendicular of the module surface (80° ~ 100°)
- 3) Aging time
  - After Aging Start, Keep the Power ON status during 5 Minutes.
  - In case of LCD, Back-light on should be checked using no signal or Full-white pattern.

#### 4.2.6. Reference (White balance Adj. coordinate and color temperature)

- Luminance : 204 Gray
- Standard color coordinate and temperature using CS-1000 (over 26 inch)

Mode	Coordinate		Temp	Δuv
	x	y		
Cool	0.269	0.273	13000 K	0.0000
Medium	0.285	0.293	9300 K	0.0000
Warm	0.313	0.329	6500 K	0.0000

- Standard color coordinate and temperature using CA-210(CH 14)

Mode	Coordinate		Temp	Δuv
	x	y		
Cool	0.269 ± 0.002	0.273 ± 0.002	13000 K	0.0000
Medium	0.285 ± 0.002	0.293 ± 0.002	9300 K	0.0000
Warm	0.313 ± 0.002	0.329 ± 0.002	6500K	0.0000

#### 4.2.7. ALELF & EDGE LED White balance table

- EDGE LED module change color coordinate because of aging time.
- Apply under the color coordinate table, for compensated aging time.

\* Normal Line

[LN5xxx, LA6xxx, LA7xxx, LA8xxx]

NC4.0	Aging time (Min)	Cool		Medium		Warm	
		X	y	x	y	x	y
		271	270	286	289	313	329
1	0-2	283	287	298	306	322	342

### 4.3. Local Dimming Function Check

Step 1) Turn on TV.

Step 2) At the Local Dimming mode, module Edge Backlight moving right to left Back light of IOP module moving.

Step 3) Confirm the Local Dimming mode.

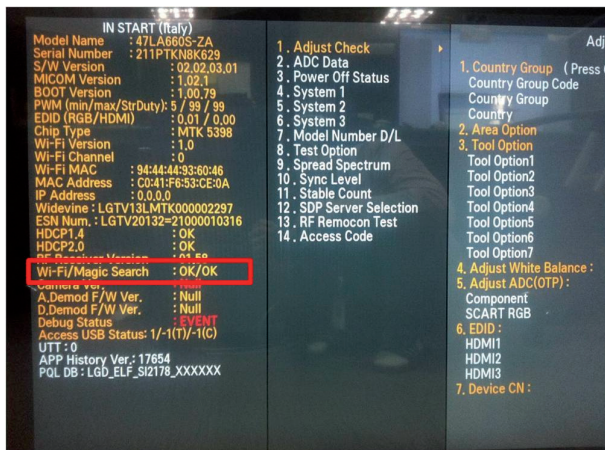

Step 4) Press "exit" key.

Local Dimming Demo.  
(Edge LED Model)

### 4.4. Magic Motion Remote control test

- Results are automatically marked in Instart OSD after through the AP/Magic Remocon Equipment on the line

### 4.5. 3D function test

(Pattern Generator MSHG-600, MSPG-6100[Support HDMI1.4])

\* HDMI mode NO. 872, pattern No.83

(1) Please input 3D test pattern like below.

(2) When 3D OSD appear automatically, then select OK key.

(3) Don't wear a 3D Glasses, check the picture like below.

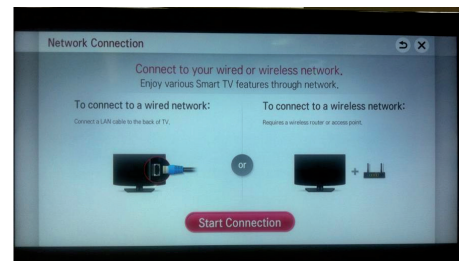

### 4.6. Wi-Fi Test

Step 1) Turn on TV

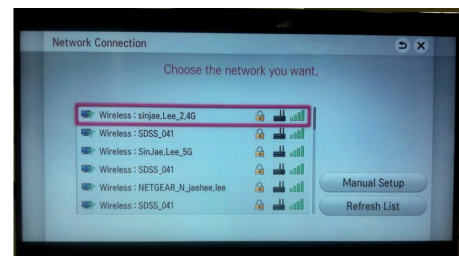

Step 2) Select Network Connection option in Network Menu.

Step 3) Select Start Connection button in Network Connection.

Step 4) If the system finds any AP like blow PIC, it is working well.

## 4.7. LNB voltage and 22KHz tone check

(only for DVB-S/S2 model)

### ▪ Test method

- (1) Set TV in Adj. mode using POWER ON.
- (2) Connect cable between satellite ANT and test JIG.
- (3) Press Yellow key(ETC+SWAP) in Adj Remote control to make LNB on.
- (4) Check LED light 'ON' at 18 V menu.
- (5) Check LED light 'ON' at 22 KHz tone menu.
- (6) Press Blue key(ETC+PIP INPUT) in Adj Remote control to make LNB off.
- (7) Check LED light 'OFF' at 18 V menu.
- (8) Check LED light 'OFF' at 22 KHz tone menu.

### ▪ Test result

- (1) After press LNB On key, '18 V LED' and '22 KHz tone LED' should be ON.
- (2) After press LNB OFF key, '18 V LED' and '22 KHz tone LED' should be OFF.

## 4.8. Option selection per country

### 4.8.1. Overview

- Option selection is only done for models in Non-EU

### 4.8.2. Method

- (1) Press ADJ key on the Adj. R/C, then select Country Group Meun
- (2) Depending on destination, select Country Group Code 04 or Country Group EU then on the lower Country option, select US, CA, MX. Selection is done using +, - or ►◄ key.

## 5. Tool Option selection

- Method : Press "ADJ" key on the Adjustment remote control, then select Tool option.

## 6. Ship-out mode check(In-stop)

- After final inspection, press "IN-STOP" key of the Adjustment remote control and check that the unit goes to Stand-by mode.

## 7. GND and Internal Pressure check

### 7.1. Method

- (1) GND & Internal Pressure auto-check preparation
  - Check that Power cord is fully inserted to the SET.  
(If loose, re-insert)
- (2) Perform GND & Internal Pressure auto-check
  - Unit fully inserted Power cord, Antenna cable and A/V arrive to the auto-check process.
  - Connect D-terminal to AV JACK TESTER
  - Auto CONTROLLER(GWS103-4) ON
  - Perform GND TEST
  - If NG, Buzzer will sound to inform the operator.
  - If OK, changeover to I/P check automatically.  
(Remove CORD, A/V form AV JACK BOX.)
  - Perform I/P test
  - If NG, Buzzer will sound to inform the operator.
  - If OK, Good lamp will lit up and the stopper will allow the pallet to move on to next process.

### 7.2. Checkpoint

- TEST voltage
  - GND: 1.5 KV / min at 100 mA
  - SIGNAL: 3 KV / min at 100 mA
- TEST time: 1 second
- TEST POINT
  - GND TEST = POWER CORD GND & SIGNAL CABLE METAL GND
  - Internal Pressure TEST = POWER CORD GND & LIVE & NEUTRAL
- LEAKAGE CURRENT: At 0.5 mArms

## 8. Audio

Measurement condition:

- (1) RF input: Mono, 1 KHz sine wave signal, 100 % Modulation
- (2) CVBS, Component: 1 KHz sine wave signal 0.5 Vrms
- (3) RGB PC: 1 KHz sine wave signal 0.7 Vrms

No.	Item	Min	Typ	Max	Unit	Remark
1.	Audio practical max Output, L/R (Distortion=10% max Output)	9	10	12	W	EQ Off AVL Off Clear Voice Off
			8.10	10.8	Vrms	
2.	Speaker (8Ω Impedance)	9	10	12	W	

## 9. USB S/W Download(Service only)

- (1) Put the USB Stick to the USB socket
- (2) Automatically detecting update file in USB Stick
  - If your downloaded program version in USB Stick is Lower, it didn't work.
  - But your downloaded version is Higher, USB data is automatically detecting (Download Version High & Power only mode, Set is automatically Download)
- (3) Show the message "Do not unplug!"

- (4) Updating is starting.

- (5) Updating Completed, The TV will restart automatically
- (6) If your TV is turned on, check your updated version and Tool option. (explain the Tool option, next stage)
  - \* If downloading version is more high than your TV have, TV can lost all channel data. In this case, you have to channel recover. if all channel data is cleared, you didn't have a DTV/ATV test on production line.

\* After downloading, have to adjust Tool Option again.

- (1) Push "IN-START" key in service remote control.
- (2) Select "Tool Option 1" and push "OK" key.
- (3) Punch in the number. (Each model has their number)

# BLOCK DIAGRAM

# EXPLODED VIEW

## IMPORTANT SAFETY NOTICE

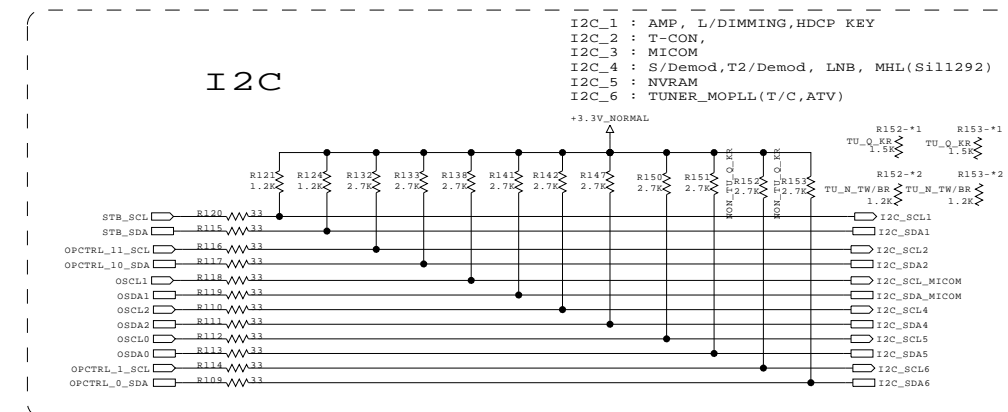

Many electrical and mechanical parts in this chassis have special safety-related characteristics. These parts are identified by  $\Delta$  in the Schematic Diagram and EXPLODED VIEW. It is essential that these special safety parts should be replaced with the same components as recommended in this manual to prevent X-RADIATION, Shock, Fire, or other Hazards. Do not modify the original design without permission of manufacturer.

The schematic diagram illustrates the electrical connections for the SCB01 module. It features several input/output pins and internal components:

- SC\_ID**: Input pin connected to ground via resistor R610 (1/16W, 1k, EU).
- SC\_ID\_SOC**: Output pin.
- SC\_CVBS\_IN**: Input pin connected to ground via capacitor C601 (10pF, OPT, EU).
- SC\_CVBS\_IN\_IP**: Input pin connected to ground via capacitor C607 (100pF, EU) and resistor R604 (75Ω, 1k, EU).
- SC\_FB**: Input pin connected to ground via resistor R608 (75Ω, 1k, EU).
- SC\_FB\_SOC**: Output pin.
- Internal Components**: A dashed box labeled "READY FOR FILTER (EMI)" contains an inductor L611 (120-ohm).
- Other Resistors**: R613 (10k, EU) connects SC\_ID to ground; R609 (2.2k, EU) connects SC\_FB to SC\_FB\_SOC.

Four circuit diagrams are shown, each representing a different signal path from the SC7020 to a corresponding SOC component:

- SC\_R\_SOC:** A resistor R623 (100) is connected to pin EU. A capacitor C615 (0.01uF) is connected between pin EU and ground (GND).
- SC\_G\_SOC:** A resistor R622 (100) is connected to pin EU. A capacitor C614 (0.01uF) is connected between pin EU and ground (GND).
- SC\_COM\_SOC:** A resistor R620 (100) is connected to pin EU. A capacitor C612 (0.01uF) is connected between pin EU and ground (GND).
- SC\_B\_SOC:** A resistor R621 (100) is connected to pin EU. A capacitor C613 (0.01uF) is connected between pin EU and ground (GND).

# EPI Interface

- EPI(Embedded Point-Point Interface)
- Features
  - Point-Point topology (support 2 Pair option)
  - CDR (Clock Data Recovery)
  - Bandwidth up to 1.85Gbps/pair at FHD 120Hz 10 bit application
  - Lock signal cascading and feedback to T-Con
  - Embedded Control Data
- Merits
  - Better reliability on common noise
  - No data skew and better EMI margin
  - Fewer lines than mini-LVDS
  - Slim PCB design

Figure1. Topology

Table 1. Example of FHD 120Hz TV

EPI	FHD (10bit) @ 960Ch		
	60Hz	120Hz	240Hz
Transmission Line	12	12	24
Bandwidth	0.84Gbps	1.68Gbps	1.68Gbps

# EPI Interface (mini-LVDS vs. EPI)

## Comparison

### HF mini-LVDS

HF mini-LVDS	FHD (10bit)		
	60Hz	120Hz	240Hz
No. of Signal	36	36	72
Connector	60pin (2ea)	60pin (2ea)	80pin (2ea)

- Difficult to upgrade bandwidth limit
- Multiple number of wires needed for higher bandwidth

### EPI (Embedded clock P-to-P Interface)

EPI	FHD (10bit)		
	60Hz	120Hz	240Hz
	960ch	960ch	720ch
No. of Signal	12	12	32
Connector	-	50 pin (2ea)	70pin (2ea)

- Better reliability on common noise
- No data skew. Better EMI margin
- Lower cost ( Cable, Connector )
- Slim S-PCB design (14mm → 10mm) helps slimmer TV

## What to change

### LCM (T-con to S-Driver IC)

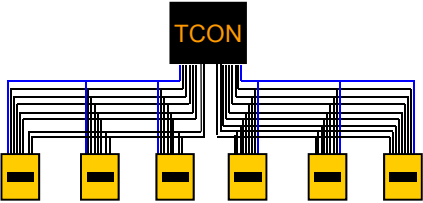

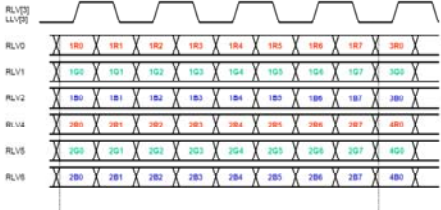

\* Bandwidth Capability

- FHD 120Hz 10Bit : 594Mbps@36Lines → 1.65Gbps@12Lines
- FHD 240Hz 10Bit : 594Mbps@72Lines → 1.25Gbps@32Lines

# NFC (Near field communication)

Near field communication (NFC) is a set of standards for smartphones and similar devices to establish radio communication with each other by touching them together or bringing them into close proximity, usually no more than a few centimetres. Present and anticipated applications include contactless transactions, data exchange, and simplified setup of more complex communications such as Wi-Fi. Communication is also possible between an NFC device and an unpowered NFC chip, called a "tag".

### Tag On

Touch the smartphone to the Tag On sticker.

- Using an LG smartphone with the NFC and Miracast functions, you can:
  - TV to Phone: run the LG TV Remote app on the smartphone.
  - Phone to TV: view the screen of the smartphone on the TV.

To end the connection, touch the smartphone to the Tag On sticker again.  
(You can also disable the Miracast function on the smartphone.)

Tag On

# Main PCB for Broadband

xxLA660S-Zx

Chassis : LD33B  
PCB P/No : EAX64797003

Main + TCON all in one

- 1. System**
- 2. Remote Buttons**
- 3. MR13 Block Diagram**
- 4. Function List**
- 5. Pairing/Un-pairing Method**

# 1. System

## ❖ **Pairing Information Transmission (Send to TV after Paired)**

- Static Calibration Data (Bypass only)
- Remote FW ver. (Save also in Receiver)
- BD\_ADDR (Save also in Receiver)

## • **Pairing Information Transmission Sequence**

- When it is paired, the remote sends packets(pairing success, F/W version, BD\_ADDR) to the receiver.
- The receiver sends the pairing success packet to TV directly.
- F/W version and BD\_ADDR packets are just saved on the receiver.
- The receiver sends F/W version or BD\_ADDR packet to TV when it is required.

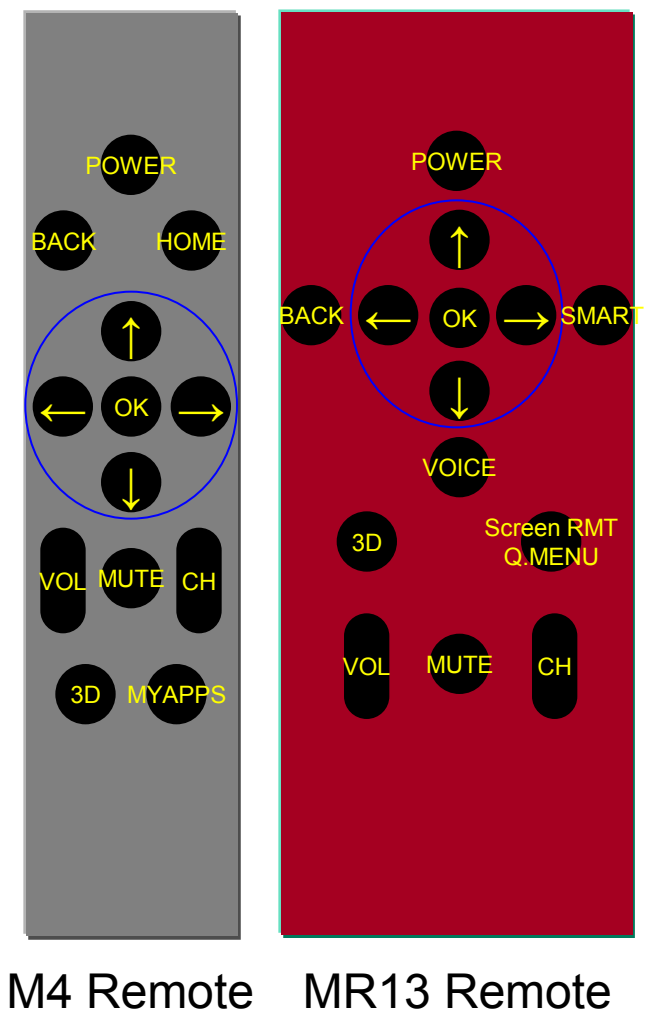

## ❖ **Motion Data Transmission**

- Period : 7.5msec
- Motion Data : gyro, accelerometer

## ❖ **Voice Data Transmission**

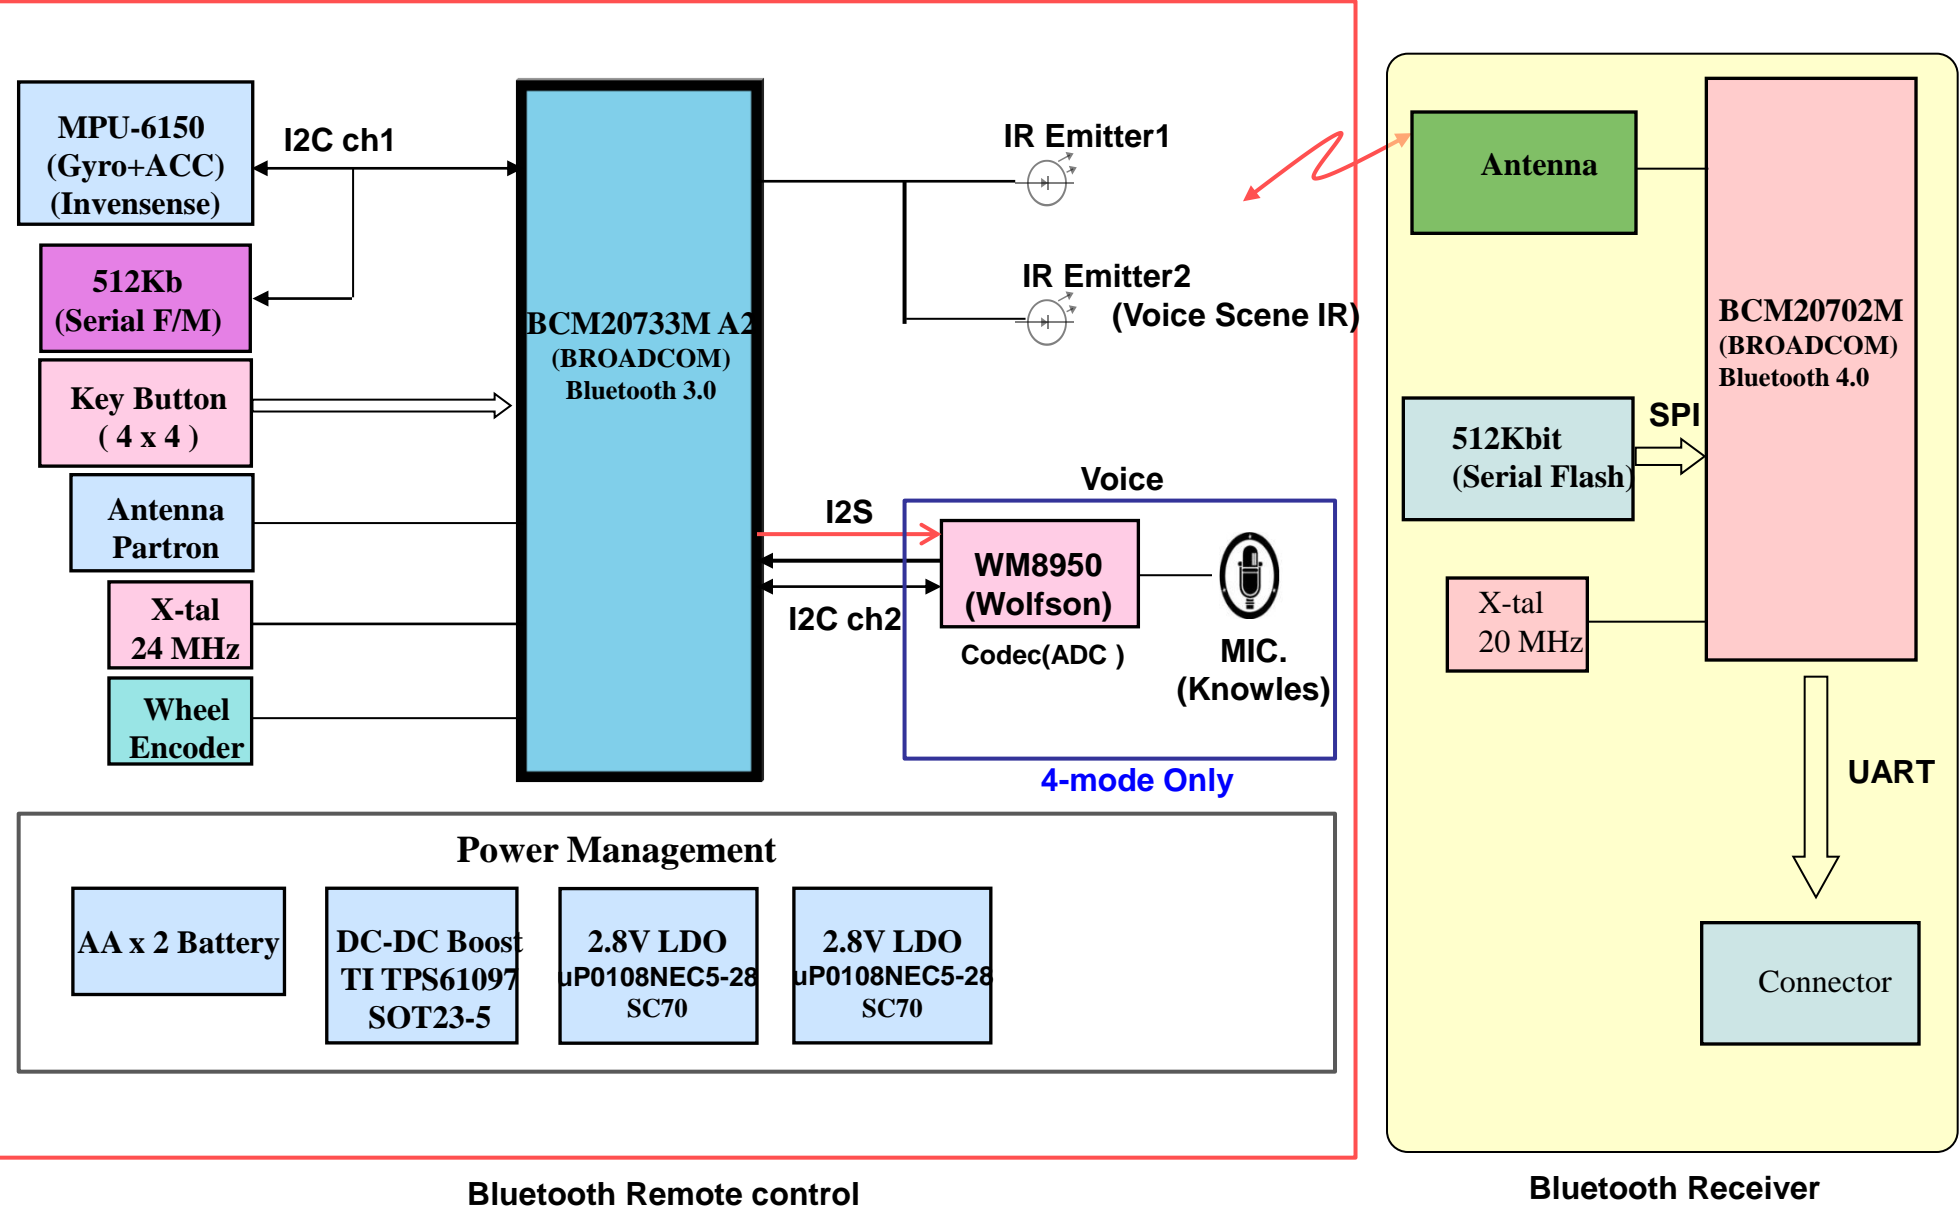

- Period : 10msec
- Voice sampling : 16khz 16bit

## 2. Remote Buttons (M4 vs. MR13)

BUTTON		RF Unpaired IR_CODE	RF Paired RF_CODE	IR continuous repeat	ETC.

## ◆ Frequency Band:

Draft 802.11n Radio: 2.4 GHz

802.11g Radio: 2.4 GHz

802.11b Radio: 2.4 GHz

USA – FCC

2412~2462MHz (Ch1~Ch11)

Canada – IC

2412~2462MHz (Ch1~Ch11)

Europe – ETSI

2412~2472MHz (Ch1~Ch13)

Japan – STD-T66/STD-33

2412~2484MHz (Ch1~Ch14)

802.11a Radio : 5 GHz

5.150~5.250GHz

5.725~5.850GHz

## ◆ Operating Channels:

IEEE 802.11b/g/n compliant:

11 channels (US, Canada)

13 channels (ETSI)

14 channels (Japan)

## ◆ Transmit Power and Sensitivity:

TX Output Power:(Typical) (Meet emission standard)

11b 17 +/- 2 dBm

11g 14 +/- 2 dBm@54Mbps (Each chain)

11n 13 +/- 2 dBm (Each chain)

Rx Sensitivity:(Typical)

-69dBm at HT20 m7 2.4GHz

-87dBm at HT20 m0 2.4GHz

-69dBm at HT20 m7 5.0GHz

-87dBm at HT20 m0 5.0GHz

## ◆ Modulation

DBPSK @1Mbps

DQPSK@2Mbps

CCK@5.5/11Mbps

BPSK@6/9 Mbps

QPSK@12/18Mbps

16-QAM@24Mbps

64-QAM@48/54Mbps and above

## ◆ Current consumption(5V DC):

Full load: 430mA

## ◆ Operating Temperature: 0 ~ 60 °C ambient

## ◆ Storage Temperature: -20 ~ 60 °C ambient

## ◆ Humidity: under 85% and must be non-condensing

## ◆ Regulation and certification compliance available:

◆CE

◆FCC

◆WiFi

◆WPS

# Widevine & HDCP 2.0 & NETFLX

LCD TV

LCD TV R&D Lab / HW1 team

# 1. Widevine?

## [Widevine]

Widevine is the Solution/Library offering Adaptive Streaming and DRM.

In BBTv, when special CP do service, this module is required key.

Currently CP which is requested to widevine, is typically Australian Bigpond Live and North American CinemaNow.

Furthermore, because the future will be the spread of CP, widevine key download for the global model should be applied to production.

(Because operation unique key should be downloaded for Widevine , Widevine key download by NSU is impossible.)

## [Widevine Key]

Widevine Key is unique data stored TV for using Widevine.

## 2. HDCP 2.0 & NETFLIX?

### ☐ HDCP

- ✓ High-bandwidth Digital Content Protection
- ✓ Protect high-value digital motion pictures, television programs and audio against unauthorized interception and copying between a digital set top box or digital video recorder and a digital TV or PC.
- ✓ Specification developed by Intel Corporation to protect digital entertainment across the DVI/HDMI interface.

### ☐ Why HDCP2.0?

- ✓ HDCP revision 2.0 supports a broader range of wired and **wireless** interfaces.

### ☐ Netflix

- ✓ the services maintain a huge selection of movies and latest releases and offer DVD rentals via mail & online streaming.

### 3. DTCP?

#### [DTCP]

The Digital Transmission Content Protection Specification defines a cryptographic protocol for protecting audio/video entertainment content from unauthorized copying, intercepting, and tampering as it traverses digital transmission mechanisms such as a high-performance serial bus that conforms to the IEEE 1394-1995 standard. Only legitimate entertainment content delivered to a source device via another approved copy protection system (such as the DVD Content Scrambling System) will be protected by this protection system.

#### [Three cryptographic Keys]

- Authentication Key which is formed as a result of authentication and used to protect the exchange keys.
- Exchange Key which is used to set up and protect content streams.
- Content Key which is used to encrypt the content being exchanged.

LCD TV	Error symptom	B. Power error _No power	Established date	2012. 12 .06	
	Content	Check power input voltage and ST-BY 3.5V	Revised date		A18

For '10 models, there is no voltage out for st-by purpose.  
When st-by, only 3.5V is normally on.

Check the DC 24V, 12V, 3.5V.

24 Pin (Power Board ↔ Main Board)

19	GND	20	GND
21	GND	22	L/DIMO_VS
23	L/DIMO_MOSI	24	L/DIMO_SCLK

Checking order when there is no audio

- ① Check the contact condition of or 24V connector of Main Board
- ② Measure the 24V input voltage supplied from Power Board  
(If there is no input voltage, remove and check the connector)
- ③ Connect the tester RX1 to the speaker terminal and if you hear the Chik Chik sound when you touch the GND and output terminal, the speaker is normal.

LCD TV	Error symptom	D. VCOM Adjustment	Established date	2012. 12 .06	
	Content	Sequence of the Vcom adjustment	Revised date		A28

## 1. Case

- LCD module change
- T-Con board change

## 2. Equipment

- Service Remote controller

## 3. Adjust sequence

- Press the 'adj' key
- select V-COM
- As pushing the right or the left button on the remote controller, And find the V-COM value Which is no or minimized the Flicker.  
**(If there is no flicker at default value, Press the exit key and finish the VCOM adjustment.)**
- Push the OK key to store the value. Then the message "Saving OK" is pop.
- Press the exit key to finish V-COM adjustment.
